PROFESSIONAL SUMMARY

Data science graduate specialising in machine learning and analytical systems for data-driven decision making. Experienced in Python and SQL with projects spanning NLP, predictive modelling and time series forecasting. Building structured data workflows from raw data processing and feature engineering to model evaluation, translating complex datasets into practical analytical insights.

EDUCATION

University of Leeds, Leeds, UK. *MSc in Data Science and Analytics* (Sep 2024 – Sep 2025)
Graduate research in machine learning, NLP, and risk modelling; strong academic performance in Machine Learning, Statistical Learning, and Natural Language Processing

PROJECTS

CVE Severity Classification Using NLP and Topic Modelling

- Processed 30K+ CVE records from the NVD and performed text preprocessing on vulnerability descriptions.
- Applied LDA to extract latent vulnerability themes and generate topic-distribution features.
- Trained Logistic Regression and Random Forest models to classify CVSS severity levels achieving ~66% accuracy.
- Built a modular Python ML pipeline with CLI inference, enabling severity prediction from raw vulnerability descriptions.

SaaS Revenue Intelligence & Forecasting

- Engineered a customer-month fact table from subscription transaction data to track MRR, churn, and cohort retention dynamics.
- Built revenue and logo cohort matrices to analyze customer lifecycle behaviour and expansion/contraction trends.
- Developed baseline forecasting models (naive persistence, moving-average & seasonal-naive models) and lag-feature regression models for MRR prediction.
- Evaluated models using MAE, RMSE, and MAPE on holdout periods, where lag-feature regression outperformed baseline forecasts.

Rossmann Sales Forecasting

- Processed 1M+ daily retail transactions from 1,115 Rossmann stores (2013–2015) to construct a store-level time-series forecasting dataset.
- Analyzed promotion effects, store competition, and weekly seasonality using time-series decomposition and exploratory demand analysis.
- Implemented SARIMA forecasting models and benchmarked performance against naive lag-1 and lag-7 baselines.
- Evaluated forecasts using MAE, RMSE, and SMAPE with time-based validation, demonstrating improved accuracy over naive models.

PROFESSIONAL EXPERIENCE

Cognizant Technology Solution - ETL & Data Engineering Intern

(Jul 2022 – Dec 2022)

- Worked within enterprise ETL workflows using Informatica to clean, validate and standardise structured datasets used in downstream analytics and reporting.
- Applied transformation rules and data validation checks to correct inconsistent records, handling missing values and ensure reliable data formatting across multiple source
- Assisted data engineering teams in monitoring ETL job runs, identifying data quality issues, and supporting fixes to maintain stable data pipelines

Shree Kay Vee Automation – IoT & Analytics Intern

(Jan 2023 – Apr 2023)

- Worked with a team analyzing IoT sensor data from industrial equipment to explore patterns related to machine performance and potential failures.
- Cleaned and preprocessed IoT sensor datasets using Python and SQL to support equipment performance analysis.
- Contributed to building basic dashboards and visualisation to track operational metrics and equipment performance.
- Supported the development of data ingestion and processing scripts used in internal analytics workflows.

SKILLS

Programming Skills – Python, SQL, R

ML & Stats – Scikit-Learn, XGBoost, Time Series Analysis, NLP.

Visualisation – Power BI, Tableau, Matplotlib

Data Engineering – Git, Linux, Docker, Informatica, MySQL

CERTIFICATION

Certified Data Analyst from Greens Technology

Python for Developers from Data camp
